                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Probes AAV83677-708 are derived from the internal transcribed spacer 2 (ITS2) region of various filamentous fungi (see AAV70845-73). The probes are species-specific, and can be used for identifying a species selected from Aspergillus flavus, A. fumigatus, A. niger, A. terreus, A. nidulans, F. solani, F. moniliforme, Mucor rouxii, M. racemosus, M. plumbeus, M. circinans, R. circinelloides, Rhizomucor pusillus, Absidia corymbifera, Cunninghamella elegans, Pseudallesheria boydii (teleomorph of Scedosporium apiospermum), Penicillium notatum, or Sporothrix schenkii. The probes can be used for differentiating filamentous fungal species from each other and from other medically important fungi
            The present sequence represents an internal transcribed spacer 2 (ITS2) and adjacent regions. Probes can be derived from the present sequence which are species specific. The specification also describes ITS2 sequence-derived probes for identifying a species selected from Aspergillus flavus, A. fumigatus, A. niger, A. terreus, A. nidulans, Fusarium solani, F. moniliforme, Mucor rouxii, M. racemosus, M. plumbeus, M. indicus, M. circinilloides f. circinelloides, Rhizopus oryzae, R.

                           mutants which are potentially useful as screening tools for antiviral compounds. The compounds may also be used to establish or determine the site at which other antivirals bin be to the total transcribed spacer (e.g., by competitive inhibition). The present sequence represents the ribosomal DNA (TDNA) internal transcribed spacer (ITS) region of Fusarium sp. MF6381, which may be used to characterise MF6381. (Updated on 15-SEP-2)
                                                                                                                                                                                                the inhibition of HIV integrase and in the prevention and treatment of HIV infection. A wide range of state of HIV infection may be treated: AIDS (acquired immunodeficiency syndrome); ARC (AIDS-related complex); both symptomatic and asymptomatic HIV infection; and actual or potentic exposure to HIV. The compounds may be used to isolate HIV integrase
                                                                                                                                                                                                                                                                                                                                             HIV integrase. The invention encompasses cultures of Fusarium sp. MF6381. The invention also relates to a composition comprising a compound of the invention in combination with an AIDS antiviral aggent, an immunomodulator and an antiinfective agent. The compounds of the invention may be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 14; 113pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New steroid compounds are HIV integrase inhibitors used for treating HIV infection and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ribosomal DNA; rDNA ITS region; internal transcribed spacer; ATCC HIV integrase inhibitor; steroid compound; human immunodeficency o acquired immunodeficiency syndrome; AIDS; ARC; AIDS-related comple symptomatic infection; asymptomatic infection; potential HIV expos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     corymbifera, Cunninghamella elegans, Pseudallesheria boydii (tele of Scedosporium apiospermum), Penicillium notatum, or Sporothrix schenkii. The probes can be used for differentiating filamentous species from each other and from other medically important fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel steroid compounds derived from the African soil fungus Fusarium sp. MF6381 (ATCC 74469) which act as inhibitors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Singh
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-SEP-2003

                                                                 This sequence represents an internal transcribed spacer (ITS) sequence of the invention. The primer pairs, based on the ITS sequences, are used for the PCR amplification detection of wheat Microdochium and Fusarium fungal pathogens, especially M. nivale, F. graminearum, F. culmorum, F. avenaceum, F. poae, F. moniliforme or F. roseum. The two different strains of fungi show different symptoms during infection, which may or may not be due to infection. Early identification of the strain causing the infection allows early, and more specific fungicidal treatment. (Updated on 25-MAR-2003 to correct PF field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel base sequence which is part of a fully defined ribosome ribonucleic acid (rRNA) gene of Cordyceps crassispora. The base sequences can be used for the classification of Cordyceps sinensis. The sequence represents a C. sinensis rRNA sequence of the

                                                                       diagnosing, treating or preventing e.g., identifying a molecule that binds to high corresponding wild type gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; mouse; Zmax1; HBM; high bone mass gene; lipid regulation; stroke; lipid-associated condition; arteriosclerosis; cardiovascular disease; ss osteoporosis; atherosclerosis; diabetic atherosclerosis; plaque build-up neurovascular condition; wound healing; gene therapy; PCR primer; probe;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes the human Zmax1 gene and the high bone mass (HBM) gene, which are found on chromosome 11q13.3. The Zmax1 and HBM genes have osteopathic activities. The genes can be used in gene therapy, antisense therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoporosis, the diagnosis and treatment of bone disorders including osteoporosis,
                                                                                                                                                                                                                                                                 Carulli JP,

Compounds identified by the method are useful for treating, diagnosing, preventing or screening for normal and abnormal lipid-associated conditions, including arteriosclerosis, cardiovascular conditions extreperoresis. The compounds may also be used in the treatment or prevention of diabetic atherosclerosis, neurovascular conditions caused by plaque build-up, poor circulation due to plaque build-up and associated poor wound healing. The methods may be used in gene therapy, pharmaceutical development, and diagnostic assays for bone development disorders. Molecules identified by comparison of Zmax1 and HBM systems can be used as surrogate markers in pharmaceutical creatment of bone diseases. Sequences ABK22776-ABK23411 represent cDNA molecules encoding human Zmax1 and HBM, and PCR primers, probes, linkers and adapters of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates bone mass (HBM) gene, Example 2; Page 323-334;

gene, expressing

to novel transgenic animals expressing expressing the corresponding wild type

the HBM high gene,

The present invention relates to High Bone Mass (HBM), LRP6 mutants, which results in a HBM-like phenotype when cell. The HBM-like phenotype results in bone mass modulat

modulation

ressed in a and/or lipid

LRP5 (Zmax1)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc comprising an alteration of the gene encoding LRP5 or LRP6, or expressing an LRP5 that is modulated by an altered gene control sequence introduced by homologous or non-homologous recombination. The transgenic animals are for the study of bone density modulation or bone mass modulation. The control may have a use in gene therapy. The transgenic animals and cultic acids are for the study of bone density modulation. The control may have a use in gene therapy. The transgenic animals and cultic acids are for the study of bone density modulation, where the complex in more than one parameter selected from bone density. Done strength, trabscular number, bone size, or bone tissue connectivity. The cultical compositions, which may be employed for treating or preventing bone compositions, which may be employed for treating or preventing bone cules involved in bone development, and for developing pharmaceutical compositions, which may be employed for treating or preventing bone cuseful in methods for diagnosing diseases involved in bone development, or characterised by reduced bone density or mass. The present sequence is or characterised by reduced bone density or mass. The present sequence is

                                             The present invention relates to regulating LRP5, LRP6 or HBM activity is a subject comprising administering a composition which modulates a Dkk activity. The method is useful for modulating lipid levels and/or bone mass, and is useful in treating or diagnosing abnormal lipid levels and bone mass disorders, such as osteoporosis, bond fracture, age-related loss of bone, a chondrodystrophy, drug-induced bone disorder, high bone turnover, hypercalcaemia, hypercostosis, osteogenesis, imperfecta, osteomalacia, osteomyelitis, Paget's disease, osteoarthritis, and rickets. Modulators of Dkk activity are useful for as reagents in studying bone mass and lipid level modulation, in modulating Wnt signaling, or treating Dkk-mediated disorders. The present sequence represents a human DNA sequence related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Regulating LRP5, LRP6 or HBM activity in a subject, useful for modulating lipid levels and/or bone mass, and for in treating bone mass disorders, e.g. osteoporosis, comprises administering a composition which modulates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Allen K,
Yaworsky

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   á
                                              This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5'-CpG-3', present in a comethylation of a particular cytosine in a motif 5'-CpG-3', present in a comethylation of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, of oligomuclectides and/or peptide-nucleic acid (PNA) oligomers and the control of the amplicon. From the ratio of labels hybridised to the two classes of the amplicon. From the ratio of labels hybridised to the two classes of coligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central convous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (CNP's), and (ii) for differentiation of cell or tissue types and for convestigating cell differentiation. The method allows the methylation convestigating cell differentiation. The method allows the method the degree of cytosine methylation described in the control of the control of the degree of cytosine methylation described in the control of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local Similarity

The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, CC degree of hybridisation to both classes is determined from the label on CC degree of hybridisation to both classes is determined from the label on CC cligomers, the degree of methylation is calculated. The method is used: CC if of a wide range of diseases, eg. cancer, disorders of the central CC enrous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation CC tabgofall represent genomic DNA sequences used to illustrate the method CC disclosure of the invention
                                                                                                                                                                                        Query Match

Sequence 6, Application US/09423233

Patent No. 6372430

GENERAL INFORMATION:

APPLICANT: The Government of the United States of America as TITLE OF INVENTION: Nucleic Acids for Detecting Aspergillus Spec TITLE OF INVENTION: Other Filamentous Fungi

FILE REFERENCE: 03063-0341WP

CURRENT APPLICATION NUMBER: US/09/423,233

CURRENT FILING DATE: 2000-06-27

NUMBER OF SEQ ID NOS: 61

SOUTWARE: Patentin Ver. 2.0

LENGTH: 319

TYPE: DNA

ORGANISM: Fusarium solani

US-09-423-233-6
                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-423-233-6
